**Abstract.** Football is a popular sport that appeals to the public. The purpose of the study was to determine the most dominant playing technique skills and quality of playing techniques from the Manchester City Team. The type of research used is quantitative descriptive research with a descriptive method approach. The subjects used in the study were all players who played in the match between Manchester City against Sevilla in the group, RB Leipzig in the last 16, Bayern München in the last 8, Real Madrid in the last 4, and Inter Milan in the final. While the object of this research concerns playing technique skills such as: passing, shooting, dribbling, ball control, and heading. It can be concluded from the results of the analysis of the Manchester City team in five matches in the UEFA Champions League season 2022-2023, namely: The average percentage of the most dominant and best techniques used by the Manchester City team is passing 564 times (88%), shooting 17 times (54%), dribbling 26 times (62%), ball control 427 times (96%) and heading 21 times (53%). The most dominant technique used by the Manchester City team in the five matches was the passing technique 2,818 times and the ball control technique was the technique that had the highest quality (96%) compared to other techniques. The average percentage of Manchester City team techniques against all opponents, seen from the percentage of playing technique skills, the Manchester City Team excels in all playing techniques such as passing (by 6%), shooting (by 20%), dribbling (by 16%), ball control (by 2%) and heading (by 6%). Based on statistical data on all playing technique skills of the Manchester City team and their opponents, overall (first half, second half and full time) the percentage of Manchester City team playing techniques only lost in one aspect of the technique, namely heading techniques (by 1% in the second half) the rest were able to excel, both in the first half, second half, and in full time, this proves that the percentage of successful passing, shooting, dribbling, ball possession and heading techniques can have an influence on the final result of the match. But in addition to the techniques possessed by players, there are other factors that affect the outcome of the match, such as: game tactics, understanding of game strategy, formation and mental factors.

**Keywords:** Analysis, Playing Techniques, Manchester City, Champions League.

## BACKGROUND

The most popular sport in the world today is football. Since ancient times, football has a long history without any signs of decline. Football can be categorised as an achievement sport if developed and fostered systematically. Football is one of the most popular sports as evidenced by the discovery of In general, the definition of exercise is one of the physical and psychological activities of a person that is useful for improving the quality of one's health after exercise (Wicaksono, 2017). Exercise is an activity that is carried out to train a person's fitness, both physically and spiritually (Fauzen, 2019). Sports in human life in general have a great influence, because through sports, humans can improve physical fitness and maintain health (Lestari & Winandi, 2019).

5 Football is a very complex sport (Modric, Versic, Chmura, Konefal, et al., 2022). Even so, football is a sport that is favoured by many people from various circles and ages, especially in Indonesia. 5 Football is a popular pastime that generates the most enthusiasm from the Indonesian people. This sport can be done anywhere so that children can play freely and can easily channel their talents (Sanubarianto et al., 2019).

10 Football is a popular sport that appeals to the public. This sport is played by two opposing teams, each of the two teams trying to put the ball into the opposing team's goal (Mubaroq & Widodo, 2022). To play football well, it is necessary to learn the basic techniques of the game, such as passing the ball, dribbling, controlling the ball and kicking the ball into the opponent's goal (Quddus et al., 2018).

When playing football, it is very important to master the basic techniques of football (Yi, Groom, et al., 2019). Indeed, these basics are a very important basis to be mastered by someone who plays football (Ramadhan & Bulqini, 2018). There are 2 basic techniques for playing football, namely: 12 techniques without the ball, such as: running and deceptive movements; 2) techniques using the ball: controlling the ball, kicking the ball, heading the ball, catching the ball, throwing the ball and keeping the goal (Achmad Pratama & Linda Susila, 2022). Football in the current era is experiencing a lot of progress, change and development very rapidly (Kerr-Cumbo, 2022).

Because the ability of basic football techniques is the main capital of a person to play football, so to improve and improve the quality in the performance of the game of football, technical problems become the determining factor of the game of football (Pranjic et al., 2019). A person who wants to achieve optimal performance in football must develop the maturity of playing technique skills. Increasing the ability to master these basic techniques can only be achieved through continuous training and matches that are planned according to the achievements to be achieved (Modric, Versic, Chmura, Andrzejewski, et al., 2022).

Football is favoured by many people because it is suitable for all groups and also has a variety of techniques. Basic football technique is a skill or ability that a player has to make movements related to football (Hariono et al., 2021). The purpose of these basic football techniques is to develop the skills and abilities that the player himself has, which are indispensable for every football game (Yi, Gómez, et al., 2019).

A person who wants to achieve optimal performance in football needs to develop four basic components consisting of: 1) physical development, 2) technical development, 3) mental development, and 4) maturity of a champion (Peñas, 2018). Indonesian football must emulate the style of play, technique, and physical fitness of elite-level competition in order to progress and develop. Elite football competition has several main components, namely technical, physical and mental (Mubaroq & Widodo, 2022).

9 The most elite football competition is the European Champions League (UEFA Champions League), the European Champions League is an annual club football competition organised by the Union of European Football Associations (UEFA) and participated by the highest European division clubs. The UEFA Champions League is a grand championship that is only followed by the national champions of each UEFA member national association (and also runners-up for some countries) 13 this competition is one of the most prestigious tournaments in the world and the

most prestigious club competition in all of European football which is held annually (Wen, 2019).

In a football tournament there are certainly many matches that are very interesting and worth reviewing. Some matches that the author feels have match quality are the matches between Manchester City against Sevilla in the group stage, Manchester City against RB Leipzig in the last 16 of the second leg, Manchester City against Bayern Munich in the last 8 of the first leg, Manchester City against Real Madrid in the last 4 of the second leg, and Manchester City against Inter Milan in the final round. Although the 2022-2023 UEFA Champions League matches have been held and it is already known which club is the champion, who is the best player, player statistics in each match and other information, but regarding the analysis of the football playing skills of the Manchester City club in winning the 2022-2023 UEFA Champions League season until now there is still no discussion. To find out the extent to which in a football match these techniques can be used or applied, an analysis of playing technique skills is needed (Rachmawan et al., 2022).

The use of statistics during matches is indispensable for athletes and coaches, because it can describe the performance of players and teams during matches. Match statistics are also an important element in sports (Pina et al., 2017). In the modern football era, the use of statistics is already and even obligatory to be a common daily use. The function of match statistics is to provide information about a match (Yi et al., 2020). Thanks to match statistics, the coach will understand his team's points and can prepare tactics and strategies for future matches.

However, the reality is that in Indonesia there is still a lack of knowledge and ability to analyse football match statistics. In addition, not all Indonesian football clubs or teams have a qualified analysis team with their own various sub-statistics (Fauzan & Bawono, 2021). Statistical analysis of matches is very important to provide an overview of events to players, coaches, managers, sponsors and football lovers in general in a match. Later this match statistical data is used as material for coach evaluation to improve the quality of the team to the maximum (Mubaroq & Widodo, 2022). Match statistics will certainly relate to basic football techniques such as the number of passing, shooting, dribbling and ball possession which represent the match (Prabowo & Widodo, 2021).

Statistics are a key element in a match. Match statistics are needed to assess the strengths and weaknesses of the opposing team to be faced. To improve performance in matches and also the quality of each game, it is necessary to analyse match results (Rachmawan et al., 2022). Besides being useful for improving team competence, match analysis is also used by coaches to see the strength of potential opponents, not only before the match, but also during the match (Rizvi & Widodo, 2019).

Researchers have an interest in knowing and discussing in detail the success of Manchester City in winning the 2022-2023 Champions League season and getting the first treble and becoming the second English league club to do so after their city rivals Manchester United in the 1998/1999 season. So the researcher needs to conduct a study entitled 'Analysis of Playing Technique Skills of Manchester City Football Club England in Winning the UEFA Champions League Title for the 2022-2023 Season' and help find out how to play tactical football like Manchester City did in the UEFA Champions League season 2022-2023

## RESEARCH METHOD

The type of research used is quantitative descriptive research. With a descriptive method approach. Quantitative research is research that focuses on the study of objective phenomena that are studied quantitatively (Musfiqon, 2012: 58).

The subjects used in this study were all players who played in the match between Manchester City and: 1) Sevilla in the group stage, 2) RB Leipzig in the round of 16 second leg, 3) Bayern Munich in the last 8 of the first leg, 4) Real Madrid in the last 4 of the second leg, and 5) Inter Milan in the final round. While the object of this research concerns playing skills such as: passing, shooting, dribbling, ball control, and heading.

The data source used in this study is secondary data obtained from video recordings of matches taken from the Vidio.com application which contains match records of all matches played by the Manchester City club.

The data taken is 5 matches of the Manchester City Club in the Champions League, namely the match between Manchester City against: 1) Sevilla in the group stage, 2) RB Leipzig in the last 16 of the second leg, 3) Bayern Munich in the last 8 of the first leg, 4) Real Madrid in the last 4 of the second leg, and 5) Inter Milan in the final.

The research instrument used to collect data is a statistical leaflet developed by the researcher. The following are the research instruments:

Table Research Instrument Sheets

No	Name	Passing		Shooting		Dribbling		Ball Control		Heading	
		S	F	S	F	S	F	S	F	S	F
	First Half										
	Second Half										
	Total										

Description:

S : Success

F : Failed

Blue : Second Half

### Criteria for Assessment of Play Skills

No	Technical	Success	Failed
1	Passing	The player passes the ball to a teammate and can be well received by his friend.	The player passes the ball but the direction is not on target.
2	Shooting	Players kick the ball towards the opponent's goal (on of target)	The player kicks the ball towards the opponent's goal but out of target.
3	Dribbling	The player dribbles the ball and can pass the opponent	The player dribbles the ball and cannot pass the opponent
4	Ball Control	Players can control the ball and the ball can be received well	The player cannot control the ball and the ball cannot be received well
5	Heading	Players head the ball to a target (teammate or opponent's goal)	The player heads the ball and does not hit the target (teammate or opponent's goal).

<sup>5</sup> The data collection technique used in this research is quantitative using descriptive analysis method. This method is used to obtain the data needed by researchers. The researcher is only an observer and will not be directly involved. Researchers will look for match statistical results from match videos, then make notes, then annotate and describe them.

The process of obtaining the data and information needed, the observer will observe and record every moment of the match from the first minute to the completion of the match. Data obtained from the observation of match videos in the form of successful passing, failed passing, shoots on target, shoots off target, successful dribbling, failed dribbling, successful ball control, failed ball control, successful heading, and failed heading, then this data will later be entered into a research instrument sheet.

The data analysis technique used is quantitative descriptive analysis technique percentage. The purpose of this study is to determine the technical analysis of the playing ability of Manchester City players in the 2022-2023 UEFA Champions League season. The data obtained from game statistics in the form of numbers is then analysed in the form of detailed explanations or descriptions through results and discussions. Researchers will provide information on how the team won the match based on match statistics.

After collecting and analysing all the data, conclusions will be drawn. To calculate the percentage, use the following formula:

$$P = \frac{n}{N} \times 100\%$$

Description:

P : Percentage sought

n : Classification

N : Total (Maksum, 2009).

## RESULTS AND DISCUSSION

### a) Results

The data presented in this discussion includes data analysis of five Champions League matches for the 2022-2023 season, namely: 1) Manchester City vs Sevilla in the group stage, 2) Manchester City vs RB Leipzig in the second leg in the last 16, 3) Manchester City vs Bayern Munich in the first leg in the last 8, 4) Manchester City vs Real Madrid in the second leg of the last 4, and 5) Manchester City vs Inter Milan in the Final round.

After conducting research by analysing match data through secondary data obtained from the company <https://www.vidio.com/>, the following observations of passing, shooting, dribbling, ball control and heading were obtained.

**Table 1. Observation Data of Playing Technique Skills of Manchester City Team Vs Sevilla Team**

**Figure 1. Percentage Comparison of the Quality of Playing Techniques of Manchester City and Sevilla Players**

\*NB The left shows the technical skills of playing in the first half. The centre shows the technical skills of playing in the second half. The right shows the technical skills of playing at full time.

In the first half of the Manchester City Team against the Sevilla Team, seen from the percentage of playing technique skills, the Manchester City Team excelled in passing techniques (by 9%), shooting (by 22%) and ball control (by 1%) while the Sevilla Team excelled in techniques such as dribbling (by 6%) and heading (by 50%).

Furthermore, in the first half, Manchester City's most frequently used technique was passing, which was used 331 times and the best technique used was ball control with a percentage of 96% success. While the most frequently used technique of Sevilla Team is passing which is 210 times used and the best technique used by Sevilla Team is ball control with a percentage reaching 95% success.

In the second half of the Manchester City Team against the Sevilla Team, seen from the percentage of playing technique skills, the Manchester City Team excelled in passing techniques (by 15%), shooting (by 28%), dribbling (by 26%), and heading (by 50%) while the Sevilla Team only excelled in ball control techniques (by 1%).

Furthermore, in the second half, the most frequently used technique by the Manchester City team was passing, which was used 275 times and the best technique used by the Manchester City team was ball control with a percentage reaching 95% success. While the technique most often used by the Sevilla Team is passing, which is 162 times used and the technique best used by the Sevilla Team is ball control with a percentage reaching 96% success.

At full time the Manchester City Team against the Sevilla Team seen from the percentage of playing technique skills, the Manchester City Team excels in passing techniques (by 11%), shooting (by 28%), and dribbling (by 13%) then draws on ball control and heading techniques.

Furthermore, at full time the most frequently used technique of the Manchester City Team is passing, which is 606 times used and the best technique used by the Manchester City Team is ball control with a percentage reaching 96% success. While the technique most often used by the

Sevilla Team is passing, which is 372 times used and the technique best used by the Sevilla Team is ball control with a percentage reaching 96% success.

**Figure 2. Percentage Comparison of the Quality of Playing Techniques of Manchester City and RB Leipzig Players**

\*NB The left shows the technical skills of playing in the first half. The centre shows the technical skills of playing in the second half. The right shows the technical skills of playing at full time.

In the first half of the Manchester City Team against the RB Leipzig Team, seen from the percentage of playing technique skills, the Manchester City Team excelled in passing techniques (by 13%), shooting (by 3%), and heading (by 100%) while the RB Leipzig Team only excelled in dribbling techniques (by 14%), then drew on ball control techniques.

Furthermore, in the first half, the most frequently used technique by the Manchester City Team was passing, which was used 299 times and the best technique used by the Manchester City Team was heading with a percentage of 100% success. While the most frequently used technique of the RB Leipzig Team is passing, which is 171 times used and the best technique used by the RB Leipzig Team is ball control with a percentage reaching 97% success.

In the second half of the Manchester City Team against RB Leipzig, seen from the percentage of playing technique skills, the Manchester City Team excelled in all playing techniques such as passing (by 12%), shooting (by 90%), dribbling (by 36%), ball control (by 8%) and heading (by 47%).

Furthermore, in the second half, the technique most often used by the Manchester City Team was passing, which was used 348 times and the best technique used by the Manchester City Team was ball control with a percentage reaching 95% success. While the most frequently used technique of the RB Leipzig Team is passing, which is 161 times used and the best technique used by the RB Leipzig Team is ball control with a percentage of 87% success.

At full time the Manchester City Team against the RB Leipzig Team seen from the percentage of playing technique skills, the Manchester City Team excels in all playing techniques such as passing (by 13%), shooting (by 44%), dribbling (by 15%), ball control (by 4%) and heading (by 63%).

Furthermore, at full time the most frequently used technique of the Manchester City Team is passing, which is 647 times used and the best technique used by the Manchester City Team is

ball control with a percentage reaching 96% success. While the technique most often used by the RB Leipzig Team is passing, which is 332 times used and the technique best used by the RB Leipzig Team is ball control with a percentage reaching 92% success.

Figure 4. Percentage Comparison of the Quality of Playing Techniques of Manchester City and Real Madrid Players

\*NB The left shows the technical skills of playing in the first half. The centre shows the technical skills of playing in the second half. The right shows the technical skills of playing at full time.

In the first half of the Manchester City Team against Real Madrid Team seen from the percentage of playing technique skills, the Manchester City Team excelled in all playing techniques such as passing (by 18%), shooting (by 37%), dribbling (by 55%), ball control (by 1%) and heading (by 100%).

Furthermore, in the first half, the most frequently used technique by the Manchester City team was passing, which was used 360 times and the best technique used by the Manchester City team was ball control with a percentage of 96% success. While the most frequently used technique by the Real Madrid Team is passing, which is 137 times used and the best technique used by the Real Madrid Team is ball control with a percentage of 88% success.

In the second half of the Manchester City Team against the Real Madrid Team, seen from the percentage of playing technique skills, the Manchester City Team excelled in shooting techniques (by 50%), dribbling (by 16%), and ball control (by 1%) while the Real Madrid Team only excelled in heading techniques (by 100%) then drew on passing techniques.

Furthermore, in the second half, the most frequently used technique by the Manchester City Team was passing, which was used 266 times and the best technique used by the Manchester City Team was shooting with a percentage of 100% success. While the most frequently used technique of the Real Madrid Team is passing, which is

284 times used and the best technique used by the Real Madrid Team is heading with a percentage reaching 100% success.

At full time Manchester City Team against Real Madrid Team seen from the percentage of playing technique skills, Manchester City Team excels in passing techniques (by 5%), shooting (by 7%), dribbling (by 15%), and ball control (by 3%) while Real Madrid Team only excels in heading techniques.

Furthermore, in full time, the most frequently used technique by the Manchester City Team is passing, which is 626 times used and the best technique used by the Manchester City Team is ball control with a percentage reaching 95% success. While the most frequently used technique of the Real Madrid Team is passing which is 421 times used and the best technique used by the Real Madrid Team is ball control with a percentage reaching 92% success.

Figure 5. Percentage Comparison of the Quality of Playing Techniques of Manchester City and Inter Milan Players

\*NB The left shows the technical skills of playing in the first half. The centre shows the technical skills of playing in the second half. The right shows the technical skills of playing at full time.

In the first half of the Manchester City Team against the Inter Milan Team, seen from the percentage of playing technique skills, the Manchester City Team excelled in all playing techniques such as passing (by 8%), shooting (by 25%), dribbling (by 21%), ball control (by 6%) and heading (by 15%).

Furthermore, in the first half, the most frequently used technique of the Manchester City Team was passing, which was used 306 times and the best technique used by the Manchester City Team was ball control with a percentage of 97% success. While the most frequently used technique of the Inter Milan Team is passing, which is 185 times used and the best technique used by the Inter Milan Team is ball control with a percentage reaching 91% success.

In the second half of the Manchester City Team against the Inter Milan Team, seen from the percentage of playing technique skills, the Manchester City Team excelled in shooting techniques (by 17%), dribbling (by 7%), and ball control (by 1%) while the Real Madrid Team excelled in passing techniques (by 1%) and heading (by 17%).

Furthermore, in the second half, the most frequently used technique by the Manchester City Team was passing, which was used 206 times and the best technique used by the Manchester City Team was ball control with a percentage of 97% success. While the most frequently used technique of the Inter Milan Team is passing, which is 209 times used and the best technique used by the Inter Milan Team is ball control with a percentage reaching 96% success.

At full time the Manchester City Team against the Inter Milan Team seen from the percentage of playing technique skills, the Manchester City Team excels in passing techniques (by 6%), shooting (by 13%), dribbling (by 14%), and ball control (by 3%) while the Real Madrid Team only excels in techniques and heading (by 7%).

Furthermore, in full time the most frequently used technique of the Manchester City Team is passing, which is 512 times used and the best technique used by the Manchester City Team is ball control with a percentage reaching 97% success. While the technique most often used by the Inter Milan Team is passing, which is 394 times used and the technique best used by the Inter Milan Team is ball control with a percentage of 94% success.

Figure 6. Percentage Comparison of the Overall Quality of Playing Techniques of Manchester City Players and Their Opponents

\*NB The left shows the technical skills of playing in the first half. The centre shows the technical skills of playing in the second half. The right shows the technical skills of playing at full time.

In the first half of the Manchester City Team against all opponents, seen from the percentage of playing technique skills, the Manchester City Team excelled in all playing techniques such as passing (by 7%), shooting (by 26%), dribbling (by 7%), ball control (by 2%) and heading (by 15%).

Furthermore, in the first half, the most frequently used technique by the Manchester City team was passing, which was used 1,536 times and the best technique used by the Manchester City team was ball control with a percentage of 96% success. While the technique most often used by the opposing team is passing, which is 996 times used and the technique best used by the opposing team is ball control with a percentage reaching 94% success.

In the second half of the Manchester City Team against the entire Opponent seen from the percentage of playing technique skills, the Manchester City Team excelled in passing techniques (by 4%), shooting (by 25%), and dribbling (by 23%) while the Opponent Team only excelled in heading techniques (by 1%) then drew on ball control techniques.

Furthermore, in the second half, the most frequently used technique by the Manchester City Team was passing, which was used 1,282 times and the best technique used by the Manchester City Team was ball control with a percentage of 95% success. While the technique most often used by the opposing team is passing, which is 1,081 times used and the technique best used by the opposing team is ball control with a percentage reaching 95% success.

At full time the Manchester City Team against all opponents seen from the percentage of playing technique skills, the Manchester City Team excels in all playing techniques such as passing (by 6%), shooting (by 20%), dribbling (by 16%), ball control (by 2%) and heading (by 6%).

Furthermore, at full time the most frequently used technique of the Manchester City Team is passing which is 2,818 times used and the best technique used by the Manchester City Team is ball control with a percentage reaching 96% success. While the technique most often used by the opposing team is passing, which is 2,077 times used and the technique best used by the opposing team is ball control with a percentage of 94% success.

### 6) Discussion

The purpose of this study is to determine the success of the playing technique skills of the Manchester City Team in the 2022-2023 Champions League season with the focus of analysis being passing, shooting, dribbling, ball control and heading. It is hoped that the data generated can be used as input for players, coaches and team management. Therefore for the upcoming match, the coach can provide an evaluation of the parts that are still lacking so that the playing performance of a team is much better or improved than before.

Table 17. Manchester City Match Score Results in the 2022-2023 Champions League

Matches	Scores		
	First Half	Second Half	Full Time
Manchester City Vs Sevilla	[ 1 : 0 ]	[ 3 : 0 ]	[ 4 : 0 ]
Manchester City Vs RB Leipzig	[ 3 : 0 ]	[ 4 : 0 ]	[ 7 : 0 ]
Manchester City Vs Bayern Munchen	[ 1 : 0 ]	[ 2 : 0 ]	[ 3 : 0 ]
Manchester City Vs Real Madrid	[ 2 : 0 ]	[ 2 : 0 ]	[ 4 : 0 ]
Manchester City Vs Inter Milan	[ 0 : 0 ]	[ 1 : 0 ]	[ 1 : 0 ]

From the data processing and analysis, the researcher found that the Manchester City team in five matches in the 2022-2023 Champions League was dominant in using passing techniques and also had a high percentage (on average 88% and only lost to the percentage of the quality of ball control techniques) and then ball control techniques were the techniques that had the highest quality (by 96%) compared to other techniques. In general, passing and ball control techniques <sup>12</sup> mutually sustainable. By performing passing and ball control techniques, players are expected to be able to master ball possession and prevent the opposing team from mastering ball possession.

Similar to excelling in ball possession percentage, a team that excels in passing percentage and successful ball control from its opponents has a high probability of scoring goals and winning the match (McHale and Relton, 2018). The dominance in passing greatly affects the team in controlling the game (Lago, 2011). When players can have good ball possession, the team will have more advantages to win a match (Cordon-Carmona, 2020).

Then to further increase player confidence, the team must be able <sup>14</sup> to control the ball and have the opportunity to score goals or defend the goal so as not to concede

(Darmawan & Putera, 2012: 57). So it is natural that Manchester City players are able to dominate the game because they have good passing and ball control qualities, because Manchester City players are dominant in performing passing techniques.

These results are in line with the research of Frans Moeller Siregar and Muhammad Faruk who stated that passing is a very important football technique (Siregar and Faruk, 2019). This is reinforced by research (Febrianto and Bulquni, 2017) which states that passing technique is a very prominent technique in football games. The impact if a team has good passing and ball control quality is that the team is strong in ball possession.

Being able to pass and ball control well will make it easier for a team to set the tempo of the game, both when attacking and defending (Fernandes, 2020). During ball control, a team will have more opportunities to see gaps in the opponent's defence, superior passing and ball control will make the opposing team have fewer opportunities to control the ball so that it will reduce the possibility of the opponent scoring goals (Araújo and Freire, 2023).

Offensive function, ball possession is able to play the tempo situationally. Sometimes slow and sometimes fast as needed. In addition, possession also provides an opportunity to be patient in spotting gaps in the opponent's defence. Possession also provides psychological confidence. Playing the ball is mentally more comfortable than constantly chasing the ball. Defensively, possession obviously prevents the opposition from scoring when they have the ball. Any team that takes longer in possession is almost certain to score goals and win the match (Folgado, 2021).

This leads us to the notion that in order to score, a team must control possession, but in some cases, the percentage of possession may not be a good indicator that the team is playing well (Lago-Peñas and Dellal, 2010). However, possession is influenced by situational variables (such as score and match status) and not only by playing style (Bradley, Lago-Peñas, Rey, and Sampaio, 2014). The Manchester City team in winning the 2022-2023 Champions League does not necessarily always excel in the percentage of passing and ball control from its opponents, but the Manchester City team is able to appear effective by always excelling in shooting techniques this can also bring the team to win the match. In the overall shooting technique percentage (first half, second half and full time), the Manchester City team always excels, this proves that the average shooting percentage of the winning team is superior to the losing team. Excellence in the number of shots will increase its chances of scoring goals and winning the match (Davids, 2018).

From the results of the study it is known that Manchester City's shooting percentage is always superior to its opponent. Shooting techniques are needed in a football game because by scoring goals against the opponent's goal, the hope of winning the match will be higher. Total shots, shots on target, and ball possession are the variables related to offensive actions that most distinguish the winning team from the teams that draw and lose (Peñas, 2021). Once again, the effectiveness of attacking actions seems to be the main factor determining victory in football (Casamichana and Lago, 2012). Leite (2013) who studied the same European tournament also observed that the team that

scored the first goal won the match in 70.9% of the matches. In the same study, when considering the attack strategy used to score a goal, organised attack was the most successful instrument (44.1% of cases). Other authors have studied the impact of the first goal on the final score and found that when a team scores the first goal, it wins the match on more than 73% of occasions in European Championships or World Cups (Armatas and Yiannakos, 2010, Armatas, Yiannakos, Papadopoulou, and Skoufas, 2009, Leite, 2013, Mitrotasios and Armatas, 2014).

Then from the results of the study it is known that the percentage of Manchester City dribbling is always superior to its opponent (by 16%), this dribbling technique is very necessary in a football game, because by doing good dribbling can provide an advantage and can open up space for friends and make it difficult for the opponent's defence. If this can be done, the hope of winning the match will be higher.

However, Manchester City players also have shortcomings in their competitive performance. The results showed that in the second half, Manchester City lost the heading technique (by 1%) to their opponents. However, overall the percentage of heading techniques of Manchester City players is slightly superior to their opponents at 53% and their opponents at 47%. Research conducted by Miftahul Hamdi found that heading techniques affect the final result of the match because if the player's header is done correctly it will increase the team's chances of scoring goals (Hamdi, 2019).

A team can win a match if the team appears attractive, controls the match, has good skills, is calm, and mentally strong (Saputra n.d. 2015). This means that every player must master the technique of playing football competently. In addition to the techniques possessed by players, there are other factors that affect the outcome of the match such as, game tactics, understanding of game strategy, very formation and mental factors. Players who have a good strategy, mean that they have strong, creative and quick thinking in making decisions. Supported by good physical, technical and mental game quality. A common mistake that coaches often make is to ignore the psychological or mental aspects of players during training, therefore they always only emphasise training for perfect mastery of tactics, techniques and formations (Harsono, 2015).

Passing, shooting, dribbling, ball control and heading techniques can determine a team in achieving a victory. Based on Table 16. statistical data on all playing technique skills of the Manchester City team and their opponents, overall (first half, second half and full time) the percentage of playing techniques of the Manchester City team only lost in one aspect of the technique, namely heading techniques (by 1% in the second half) the rest were able to excel, this proves that the percentage of successful passing, shooting, dribbling, ball possession and heading techniques can have an influence on the victory of football games. Judging from the results of statistical observations on five Manchester City matches in the 2022-2023 Champions League, overall playing technique skills such as passing, shooting, dribbling, ball control and heading performed by the Manchester City Team have quality skills above 50% while their opponents still

have quality techniques that are still below 50%, this is one of the factors that make Manchester City able to win the 2022-2023 Champions League season

## CONCLUSION AND SUGGESTION

### a) <sup>6</sup> Conclusion

It can be concluded from the results of the analysis of the Manchester City team in five matches in the UEFA Champions League season 2022-2023, namely:

1. The average percentage of the most dominant and best techniques used by the Manchester City team is passing 564 times (88%), shooting 17 times (54%), dribbling 26 times (62%), ball control 427 times (96%) and heading 21 times (53%).
2. The most dominant technique used by the Manchester City team in the five matches was the passing technique 2,818 times and the ball control technique was the technique that had the highest quality (96%) compared to other techniques.
3. The average percentage of Manchester City team techniques against all opponents is seen from the percentage of playing technique skills, the Manchester City Team excels in all playing techniques such as passing (by 6%), shooting (by 20%), dribbling (by 16%), ball control (by 2%) and heading (by 6%).

Based on statistical data on all playing technique skills of the Manchester City team and their opponents, overall (first half, second half and full time) the percentage of playing techniques of the Manchester City team only lost in one aspect of the technique, namely heading techniques (by 1% in the second half) the rest were able to excel, both in the first half, second half and full time, this proves that the percentage of successful passing, shooting, dribbling, ball possession and heading techniques can have an influence on the final result of the match.

Judging from the results of statistical observations in five Manchester City matches in the 2022-2023 Champions League, overall playing technique skills such as passing, shooting, dribbling, ball control and heading performed by the Manchester City team have quality skills above 50% while their opponents still have quality techniques that are still below 50%, this is one of the factors that make the Manchester City team able to carry out tactics, strategies and dominate the game and succeed in becoming champions in the 2022-2023 Champions League season. But in addition to the techniques possessed by players, there are other factors that influence the outcome of matches such as, game tactics, understanding of game strategies, formations and mental factors.

### <sup>16</sup> a) Suggestions

Based on the above conclusions, the researcher provides the following suggestions:

1. To optimise the team's performance in football matches, it is better to pay attention to playing technique skills by increasing the effectiveness of training.
2. Video analysis of the match will benefit the team and players, and the football game will be maximised.
3. This method is very effective as an evaluation material for teams and players, in order to improve the quality of play.

The author realises that there are many shortcomings and limitations in this research, this research only focuses on passing, shooting, dribbling, ball control and headers. It is estimated that there are still many factors that influence the skills of playing football, therefore it is hoped that future researchers will further refine the research by adding other research variables.
